

Software Name:LMMS

Presenter: Shivam Bhatt(92301733046)

Introduction to LMMS

What is LMMS?

- LMMS stands for 'Linux MultiMedia Studio.'
- It is a free and open-source Digital Audio Workstation (DAW).
- Used for creating music, beats, and melodies.

Why Choose LMMS?

- Free and Accessible: No cost barrier to entry.
- Cross-platform: Works on Windows, macOS, and Linux.
- Beginner-Friendly: Excellent for learning the basics of music production.
- Versatile: Supports sound filters, effects, MIDI, and synthesizers.

Homescreen

Plugin

Experimental Task 1: Basic Oscillator (Sine Wave Generator)

Steps:

- Open LMMS and go to Instrument Plugins.
- Add a new plugin (e.g., Triple Oscillator) to your project.
- Open the plugin window → set waveform to Sine.
- Adjust frequency using pitch control knob.
- Change amplitude using volume slider.
- Play notes using the on-screen piano or connected MIDI keyboard.
- Observe real-time sine wave generation in LMMS.

Experimental Task 2:

Steps:

- Use the oscillator plugin from Experiment 1 as sound source.
- Go to Effect Plugins in LMMS and choose LADSPA Filters → Low-Pass Filter.
- Connect the oscillator plugin output → filter input.
- Open filter GUI and adjust Cutoff Frequency.
- Play the oscillator sound and lower the cutoff to remove high frequencies.
- Adjust Resonance knob to emphasize cutoff edge.
